Advanced Java

Unit #1 - Exceptions and Advanced File I/O

Create a program that reads the files: places.csv and stuff.csv. The places file is the driver and the stuff file is the transaction file. There are numerous ways to solve the following problem.

The program must include JavaDoc, Junit and be uploaded to GitHub.

Create a report that prints out each country and the number of cities listed in the places file and the number of stuff listed in the stuff file.

```
Country          Cities  Stuff
=======          ======  =====
Afghanistan         1       2
Andorra             1       2
Angola              2       4
```

Rubric 100 points

Program Runs	Program Runs and at least minimally fulfills the requirements	20
JavaDoc	Program is thoroughly Documented with Java Doc Comments	10
Junit	Program is thoroughly Unit Tested	20
Output	Program's output is formatted as required	10
Results	Program produces the correct output	10
Two-File	Program properly implements a Two-File match	10
Exceptions	Exceptions are handled correctly	10
File I-O	Files are opened, read and closed correctly	10
